Art Unit: 2653

Response to Arguments

1. Applicant's arguments filed on May 10, 2004 have been fully considered but they are not deemed to be persuasive.

Applicant asserts on page 8:

Applicant could find no teaching or suggestion in Jiang et al. of first and second optics where the second optics split the light into a first beam having a first focal point received by the first photodetector array and a second beam having a second focal point received by the second photodetector array.

The Examiner maintains that Jiang et al. (U.S. Patent 5,767,741) discloses second optics (65) configured to deliver light reflected from the data medium to a first photodetector array (63) and second photodetector array (63), the light delivered from the second optics split into a first beam having a first focal point received by the first photodetector array and a second beam having a second focal point received by the second photodetector array (Figs. 8 and 9; a photodetector has plural areas for detecting the light beams diffracted by the holographic optical element (65)). The claim does not state that the second optics does the splitting, it just states that the light delivered from the second optics is split. Jiang et al shows that the light delivered is split.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 09/540,657

Art Unit: 2653

Claims 43-48 are rejected under 35 U.S.C. 102(b) as being anticipated by Jiang et al. (U.S. Patent 5,757,741).

Regarding claim 43, see Figs. 8 and 9 of Jiang et al. which show an optical head for a read/write apparatus comprising: a light source (Fig. 8, element 62; See also column 8, lines 5-10); first optics (Fig. 8, element 67; See also column 8, lines 5-10) configured to deliver at least a portion of light from the light source to a data medium; and second optics (Fig. 8, element 65; See also column 8, lines 5-10) configured to deliver light reflected from the data medium to a first photodetector array (Fig. 8, element 63; See also column 8, lines 10-20) and second photodetector array (Fig. 8, element 65; See also column 8, lines 10-20), the light delivered from the second optics split into a first beam having a first focal point received by the first photodetector array and a second beam having a second focal point received by the second photodetector array (column 10, lines 5-15; column 7, lines 59-67).

Regarding claim 44, see Figs. 8 and 9 of Jiang et al. which show an apparatus as claimed in Claim 43, wherein the first photodetector array includes first, second and third substantially parallel bar-shaped photodetector regions and wherein the second photodetector array comprises fourth, fifth and sixth substantially parallel bar-shaped photodetector regions (column 8, lines 10-20).

Regarding claim 45, see Figs. 8 and 9 of Jiang et al. which show an apparatus as claimed in Claim 44, further comprising circuitry for combining signals from the first, second, third, fourth, fifth and sixth photodetector regions to provide at least a focus error signal and a data signal (column 8, lines 32-42).

Application/Control Number: 09/540,657

Art Unit: 2653

Regarding claim 46, see Figs. 8 and 9 of Jiang et al. which show an apparatus as claimed in Claim 44, further comprising circuitry for combining output from the first, third, fourth and sixth photodetector arrays regions to provide at least a first tracking error signal (column 8, lines 32-42).

Regarding claim 47, see Figs. 8 and 9 of Jiang et al. which show an apparatus as claimed in Claim 45, wherein the focus error signal is substantially a linear function of focus in a focus region including a nominal focus point (column 8, lines 32-42).

Regarding claim 48, see Figs. 6, 8 and 9 of Jiang et al. which show an apparatus as claimed in Claim 44, wherein a size of at least the second and fifth photodetector regions, relative to the first and third regions is selected so as to reduce cross talk between a focus error signal and a tracking error signal (column 8, lines 32-42).

Allowable Subject Matter

- 3. Claims 1- 27 and 34-38 are allowed.
- 4. The following is an examiner's statement of reasons for allowance:

Independent claim 1 requires an optical head for use in a optical read/write apparatus for use with a read/write medium comprising: a light source, outputting light at an initial light output location; at least a first photodetector array mounted in a fixed position with respect to the initial light output location, the first photodetector array having at least a first surface defining a photodetector plane; and an optical element unit, mounted in a fixed position with respect to the light output location, the optical element unit having a first beam shaping optical element and second beam shaping optical element which receive light output at the light output location to

Application/Control Number: 09/540,657

Art Unit: 2653

modify the angular divergence of the light output, the optical element unit including at least a third optical element configured for directing at least a portion of light reflected from the medium along a path for arrival at the first photodetector array; the optical head providing at least a first optical path, where the first optical path originates at the initial light output location and reaches at least the read/write medium. These features in combination with the other features of the claim are not anticipated by nor made obvious over, the prior art of record.

Claims 2- 27 and 34-38 are allowed with their respective parent claim.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Point of Contact

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kimlien Le whose telephone number is 703 305 3498. The examiner can normally be reached on M-F 8a.m-5p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Korzuch can be reached on 703 305 6137. The fax phone numbers for the organization where this application or proceeding is assigned are 703 872 9314 for regular communications and 703 872 9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 305 3900.
